Neuherberg, GERNANY
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de;
sequenced by BWRZ (Biomedical Research Center at the
Heinrich-Heine-University, Duesseldorf/Germany) within the cDNA
sequencing consortium of the German Genome Project. This clone
(DKFZp434C0829) is available at the RZPD Deutsches
Ressourcenzentrum fuer Genomforschung GmbH in Berlin,
Please contact RZPD for ordering:

/clone located according to mRNA size fraction, ligated with containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with Not I and then cloned directionally into pXX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is CGAACTGAAT. This library was created for the University lows Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Montal Health (NIMH), Hemin Chin, Ph.D.,
                                                                                                                                                                                                                                                                                                                                                                                    Enkaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Mus. E. (1920).

New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.

Claim 10; SEQ ID NO 4; 345pp; English.

The present invention describes a 254P1D6B small interfering RNA (51RNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254P1D6B protein, or corresponds to a subsequence of the occess the composition that comprises, consists assembled. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO:3, 5 or 7 ADR00592. ADR00594 or ADR00596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein contact is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 98 homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) generating a mammalian immune response directed to the protein or a citat encodes the protein; (3) a composition that modulates the composition that comprises the composition that modulates the castum of a call that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human cut unit transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and con-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and con-human transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and concerned to a servival of cancer cells that expresses the protein of P1; and concerned expresses the protein of P1; and concerned expresses the protein of P1; and concerned expresses the protein of P1; 254P1D6B has cytostatic activity, and can be used in the exemplification of the present concerned by a concerned by the composition of the presen

The present invention describes a 254P1D6B small interfering RNA (SiRNA) composition that comprises a double stranded siRNA that corresponds to the nucleic acid open reading frame (ORF) sequence which encodes the 254P1D6B protein, or corresponds to a subsequence of the codes the computation of stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists essentially of, or consists of a peptide of eight, nine, ten, or consists essentially of, or consists of a peptide of eight, nine, ten, or cleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00595), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein CC that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99, homologous or identical to an entire amino acid sequence of P1; (2) a polynucleotide that is a full complement of the polynucleotide described above; (4) generating a mammalian immune response directed to the protein of P1; (5) generating a mammalian immune response directed to the protein of P1; (5) detecting, in a sample, the presence of a 254P1D6B-related protein or a 254P1D6B-related polynucleotide; (6) a composition that modulates the composition that comprises the composition described above; in a human continuant transgenic animal that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and continual described above in a human continual that produces the antibody; (11) delivering a cytotoxic agent or a diagnostic agent to a cell that expresses the protein of P1; and continual detecting growth, reproduction or survival of cancer cells that express the protein of P1: 254P1D6B has cytostatic activity, and can be useful growth, reproduction or survival of cancer cells the human 254P1D6B v.3 nucleotide sequence, which is used in the present invention. The human 254P1D6B errores the protein of the present invention. The human 254P1D6B errores the protein of protein or surviv
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New 254PID6B SIRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PID6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.
                                                                                                                                         254PID6B-related protein; cytostatic; gene therapy; cancer; human;

The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to composition that comprises a double stranded siRNA that corresponds to a subsequence which encodes the corresponds to a subsequence of the overwhere the couple stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous consists assentially of or consists (1) a composition that comprises, consists essentially of, or consists (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (Pl, see SEQ ID NO:3, 5 or 7 ADRO0592, ADRO0594 or ADRO0596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein cot that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 93k homologous or identical to an entire amino acid sequence of P1; (2) a polymuclectide that is a full complement of the polymuclectide described above; (4) constraints in a sample, the presence of a 254P1D6B-related protein or a conference of a 254P1D6B-related protein or a composition that comprises the composition that modulates the composition that comprises the composition described above; (10) a non-human transgenic animal that produces the antibody; (11) delivering a cytocytic agent or a diagnostic agent to a cell that expresses the protein of P1; (7) a pharmaceutical conference of a protein of caperating and detecting growth, reproduction or survival of cancer cells that express the protein of P1. 254P1D6B has cytostatic activity, and can be useful for treating and detecting cancer. The present expressents the protein of P1. Conference of the present sequence represents the composition of the present invention. The human 254P1D6B are useful. The present invention. The human 254P1D6B are useful.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting
                                                                                                                                                                                         254PID6B; small interfering RNA; siRNA; immune response;

The present invention describes a 254PIDGB small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to composition that comprises a double stranded siRNA that corresponds to a subsequence which encodes the case in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (P., see SEQ ID NO:3, 5 or 7 ADRO6592, ADRO6594 or ADRO6596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein contact is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or dentical to an entire amino acid sequence of PI; (2) a polymucleotide that is a full complement of the polymucleotide described above, (4) dentical in a sample, the presence of RI; (2) a polymucleotide chart is a full complement of the polymucleotide described above, (4) detecting in a sample, the presence of a 254PID6B-related protein or a 254PID6B-related protein or a 254PID6B-related protein or a composition that modulates the composition that modulates the composition that comprises the composition that modulates the composition that comprises the composition described above in a human transgenic animal that produces the antibody; (1) a pharmaceutical corrections to a diagnostic agent to a cell that expresses the protein of P1; and hybridoma that produces the antibody; (1) a correction of a diagnostic agent to a cell that expresses the protein of P1; and C12 inhibiting growth, reproduction or survival of cancer cells that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New 254P1D6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254P1D6B protein or corresponds to a subsequence of the ORF, useful for detecting
                                                                                                                                                                                                                                                                                                              254PID6B-related protein, cytostatic; gene therapy; cancer; human; 254PID6B v.3; gene; ss; chromosome 6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ge
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Challita-Eid PM,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a 254P1D6B small interfering RNA (siRNA) composition that comprises a double stranded siRNA that corresponds to 254P1D6B protein, or corresponds to a subsequence of the ORF, where the double stranded siRNA is 19, 20, 21, 22, 23, 24, or 25 contiguous nucleotides in length. Also described: (1) a composition that comprises, consists essentially of, or consists of a peptide of eight, nine, ten, or eleven contiguous amino acids of a protein of figure 2 (P1, see SEQ ID NO:3, 5 or 7 ADR00592, ADR00594 or ADR00596), or a peptide included in any of the 42 lists of peptides, given in the specification, or a protein that is at least 90, 91, 92, 93, 94, 95, 96, 97, 98, or 99% homologous or identical to an entire amino acid sequence of P1; (2) a polymucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New 254PlD6B siRNA composition comprising a double stranded siRNA that corresponds to the nucleic acid ORF sequence which encodes the 254PlD6B protein or corresponds to a subsequence of the ORF, useful for detecting and treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human 254PlD6B v.3 transcript variant nucleotide sequence SEQ ID NO:269.

that is a full complement of the polymucleotide described above, (4) generating a mammalian immune response directed to the protein of P1; (5) detecting, in a sample, the presence of a 254PiD6B-related polymucleotide, (6) a composition that modulates the status of a cell that expresses a protein of P1; (7) a pharmaceutical composition that comprises the composition described above in a human unit dose form; (8) an antibody or its fragment, which is monoclonal; (9) a non-human transgenic animal that produces the antibody; (10) a hyridoma that produces the antibody; (10) a non-human transgenic animal that expresses the protein of P1; and class the protein of P1; 254PID6B has cytostatic activity, and can be used in gene therapy. The compositions, molecules and methods are useful cor treating and detecting cancer. The present sequence represents the human 254PID6B v.3 transcript variant nucleotide sequence, which is used in the exemplification of the present invention. The human 254PID6B gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1160
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1220
